SUBJECT: Defense Investigative Service (DIS) Upgrade from CICS 1.6.1 to CICS 1.7

TO: All DIS Terminal Users

1. The DIS Information Systems Center is planning to upgrade its Customer Information Control System (CICS) software from release 1.6.1 to release 1.7 by the end of July, 1988. Current testing with the product is encouraging with only very minor problems being found with certain CICS applications.

2. In most cases, this software upgrade should be transparent to the end-user. However, anyone experiencing problems accessing DIS applications in the late July timeframe should make their vendor, where applicable, aware of the software changes implemented on the host-end and take necessary steps to accommodate these changes.

3. Any questions which you may have may be directed to Debbie Mitchell, D0203, on Autovon 283-9632.

THOMAS E. CAINE
Director, Information Systems Center
